Seminar & Masterclass

**AUGUST**  
**24 - 25<sup>th</sup>**  
2023

Yogyakarta,  
Royal Ambarrukmo

**Hybrid Event**

Organized by:

Supported by:

Organizations are facing challenging industry dynamics that require them to quickly adapt to new situations. In those circumstances, the organization must be resilient to ensure future sustainability.

GRC-Governance, Risk Management, and Compliance are one of the concepts and tools that can help organizations to build a resilient future. Nowadays, stakeholders are beginning to demand a structured and systematic management approach to ensure that the organization also considers environmental and social aspects as highlighted in the SDGs-Sustainable Development Goals. To achieve these SDGs goals, organizations need to adopt the ESG-Environment Social Governance framework as a credential that the organization has contributed to supporting the achievement of SDGs. Therefore, in order to build a resilient future, organizations need to integrate the GRC concept and ESG as part of the system of organization.

The GRC Summit 2023 is an international conference held annually by the GRC Association that brings together practitioners, academicians, and regulators from various industrial backgrounds (local and foreign) to share knowledge and experience in implementing Integrated GRC. This year's topic is “**Building Resilient Future through GRC and ESG**”.

The two days events consist of seminars and a masterclass that discusses how the synergy of GRC and ESG can contribute to optimizing organizational value and making them become more resilient in the future. Emphasis on the GRC and ESG relationship and how good GRC practices will influence the quality and level of performance of ESG organizations. Hence, it will create a better position in the context of ESG investments.
